CYBERFORGE

CODE. DEFEND. CONQUER.

CyberForge is a cybersecurity simulation game that teaches real-world cybersecurity skills and Python programming through hands-on challenges, missions, and interactive lessons.

TESTING GUIDE

Follow these steps to set up, run, and test CyberForge on your PC.

1 GO TO THE PROJECT

Open the GitHub repository:
https://github.com/mrcamo13/CyberForge

2 INSTALL REQUIREMENTS

Make sure you have the following installed:

- Python 3.8+
- Git (optional but recommended)

Check versions:

```
python --version
git --version
```

3 DOWNLOAD THE PROJECT

Option A – Using Git (Recommended)

```
git clone https://github.com/mrcamo13/CyberForge.git
cd CyberForge
```

Option B – Manual Download

- Click Code → Download ZIP on GitHub
- Extract the folder
- Open terminal inside the folder

4 INSTALL DEPENDENCIES

If the project includes a requirements.txt file, run:

```
pip install -r requirements.txt
```

If not, the project may not require additional dependencies.

5 RUN THE GAME

Option A – Using Python (if no .bat file)

```
python main.py
```

Option B – Using play.bat (Easiest Way)

Simply double-click the `play.bat` file in the project folder.This will launch CyberForge automatically!

⭐ `play.bat` is the fastest way to start the game.

6 TEST THE GAME

Once the game starts:

- Follow the on-screen instructions
- Complete challenges and missions
- Defend your systems and level up
- Enjoy and explore all features!

ABOUT CYBERFORGE

CyberForge is more than a game — it's a learning platform. You'll strengthen your cybersecurity knowledge while improving your Python skills through practical coding and real-world scenarios.

YOU'LL LEARN PYTHON BY:

- Writing and understanding Python code in real-world contexts
- Solving problems with logic and algorithms
- Reading and modifying scripts
- Building cybersecurity tools and automations

THE 4 CORE SECTIONS

LEARN	Learn cybersecurity and Python concepts through interactive lessons and tutorials.
PRACTICE	Practice your skills with hands-on exercises and coding challenges.
CHALLENGE	Take on dynamic missions and cybersecurity scenarios.
DEFEND	Protect systems, stop cyber attacks, and earn rewards.

COMMON FIXES

- ✗ Module not found
  `pip install <missing-module>`
- ✗ Wrong Python version
  Try using:
  `python3 main.py`
- ✗ Permission issues (Linux/Mac)
  `chmod +x main.py`

OPTIONAL – BETTER TESTING

Run with debug mode (if supported):

```
python main.py --debug
```

Or add a simple print statement in the code:

```
print("Running CyberForge...")
```

NOTES

- Internet connection is only needed if the game uses online features.
- All game data is stored locally unless configured otherwise.
- Make sure to read any README.md file for specific instructions.

NEED HELP?

If you encounter any issues, open an issue on the GitHub repository:
https://github.com/mrcamo13/CyberForge

Enjoy playing CyberForge, learning Python, and becoming a cybersecurity expert!
